

See the SERVICE SCHEDULE for the correct service interval.

Do not operate the excavator with a defective exhaust system.

Stop the engine. Open the tailgate.

Remove the plug from the bottom of the silencer. Start the engine and run for about 10 seconds while a second person, wearing safety glasses, holds a piece of wood over the outlet of the silencer. The carbon deposits will be forced out of the silencer plug hole.

Stop the engine. Install and tighten the plug.

Close the tailgate.

Raise one side of the machine approximately 100 mm using the boom and arm

Raise the blade fully and install jackstands under the blade and track frame. Lower the boom until all machine weight is on the jackstands.

Stop the engine.

Measure the clearance at the middle track roller. Do not get fingers into pinch points between the track and the track roller. Use a bolt or a dowel of the appropriate size to check the gap between the contact edge of the roller and the top edge of the track guide
